Lab 6 - Line coverage

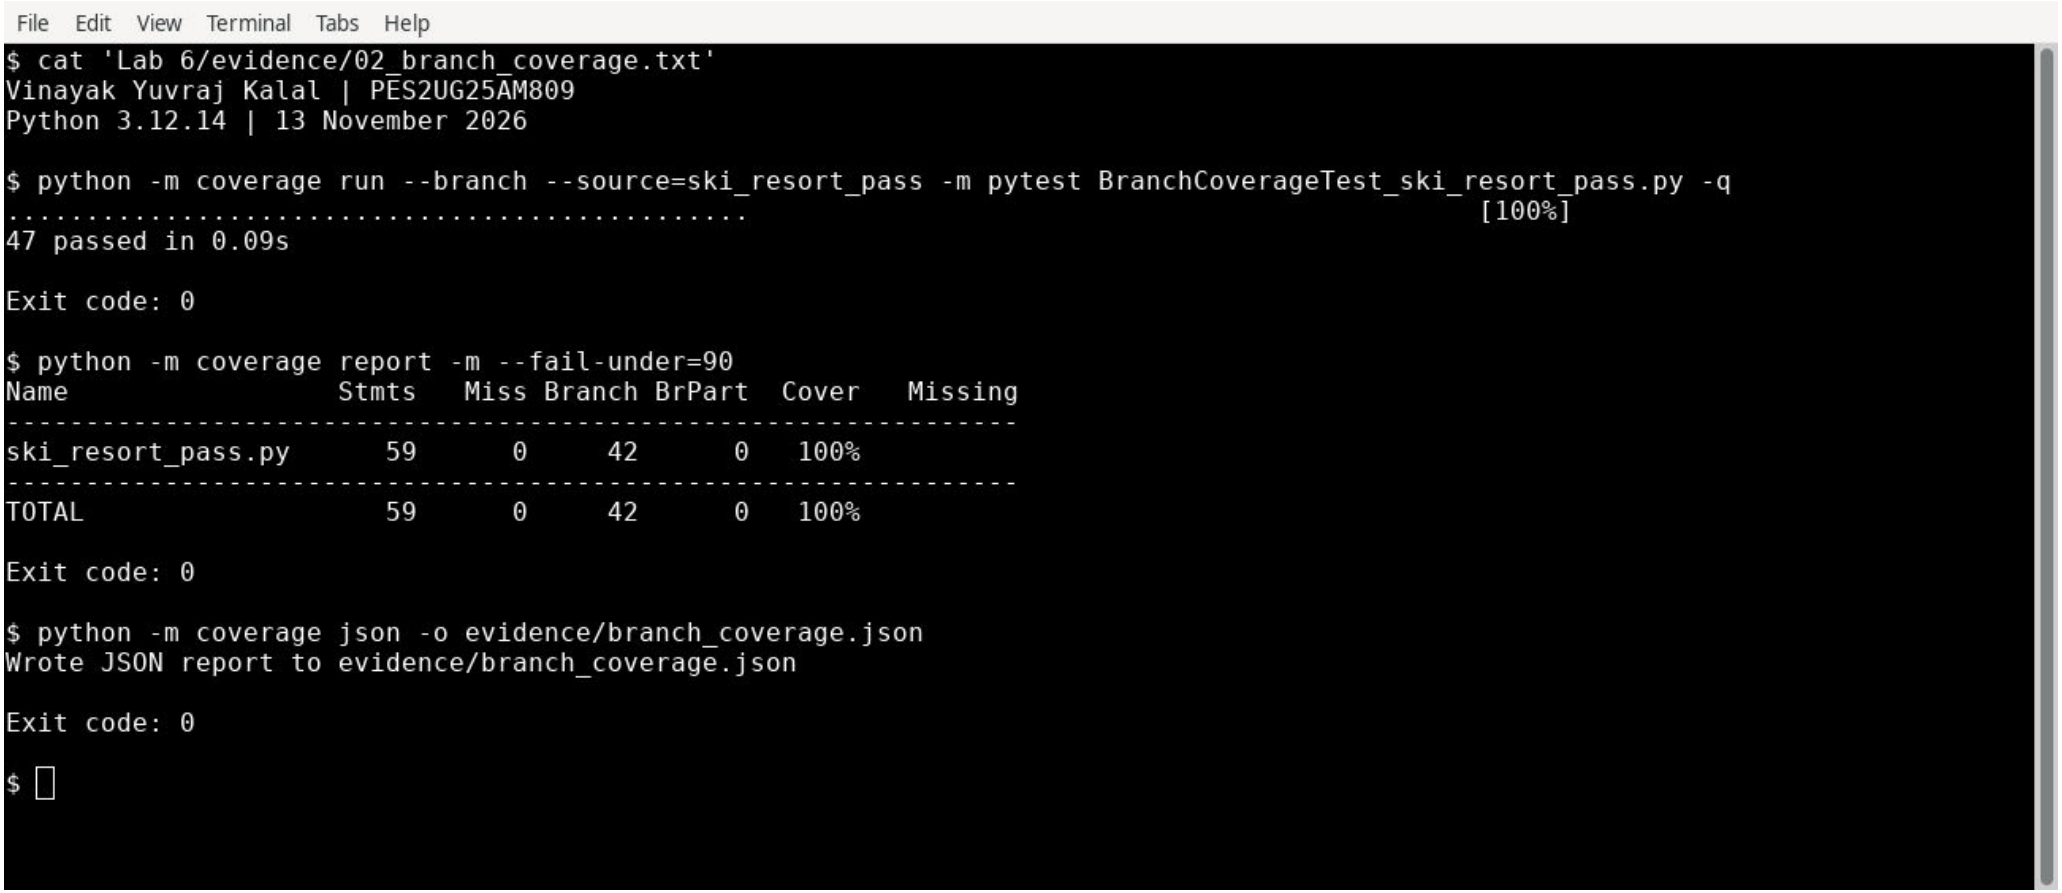

CodeCoverageTest_ski_resort_pass.py

14 tests passed. All 59 executable statements covered: 100% line coverage.

Lab 6 - Branch coverage

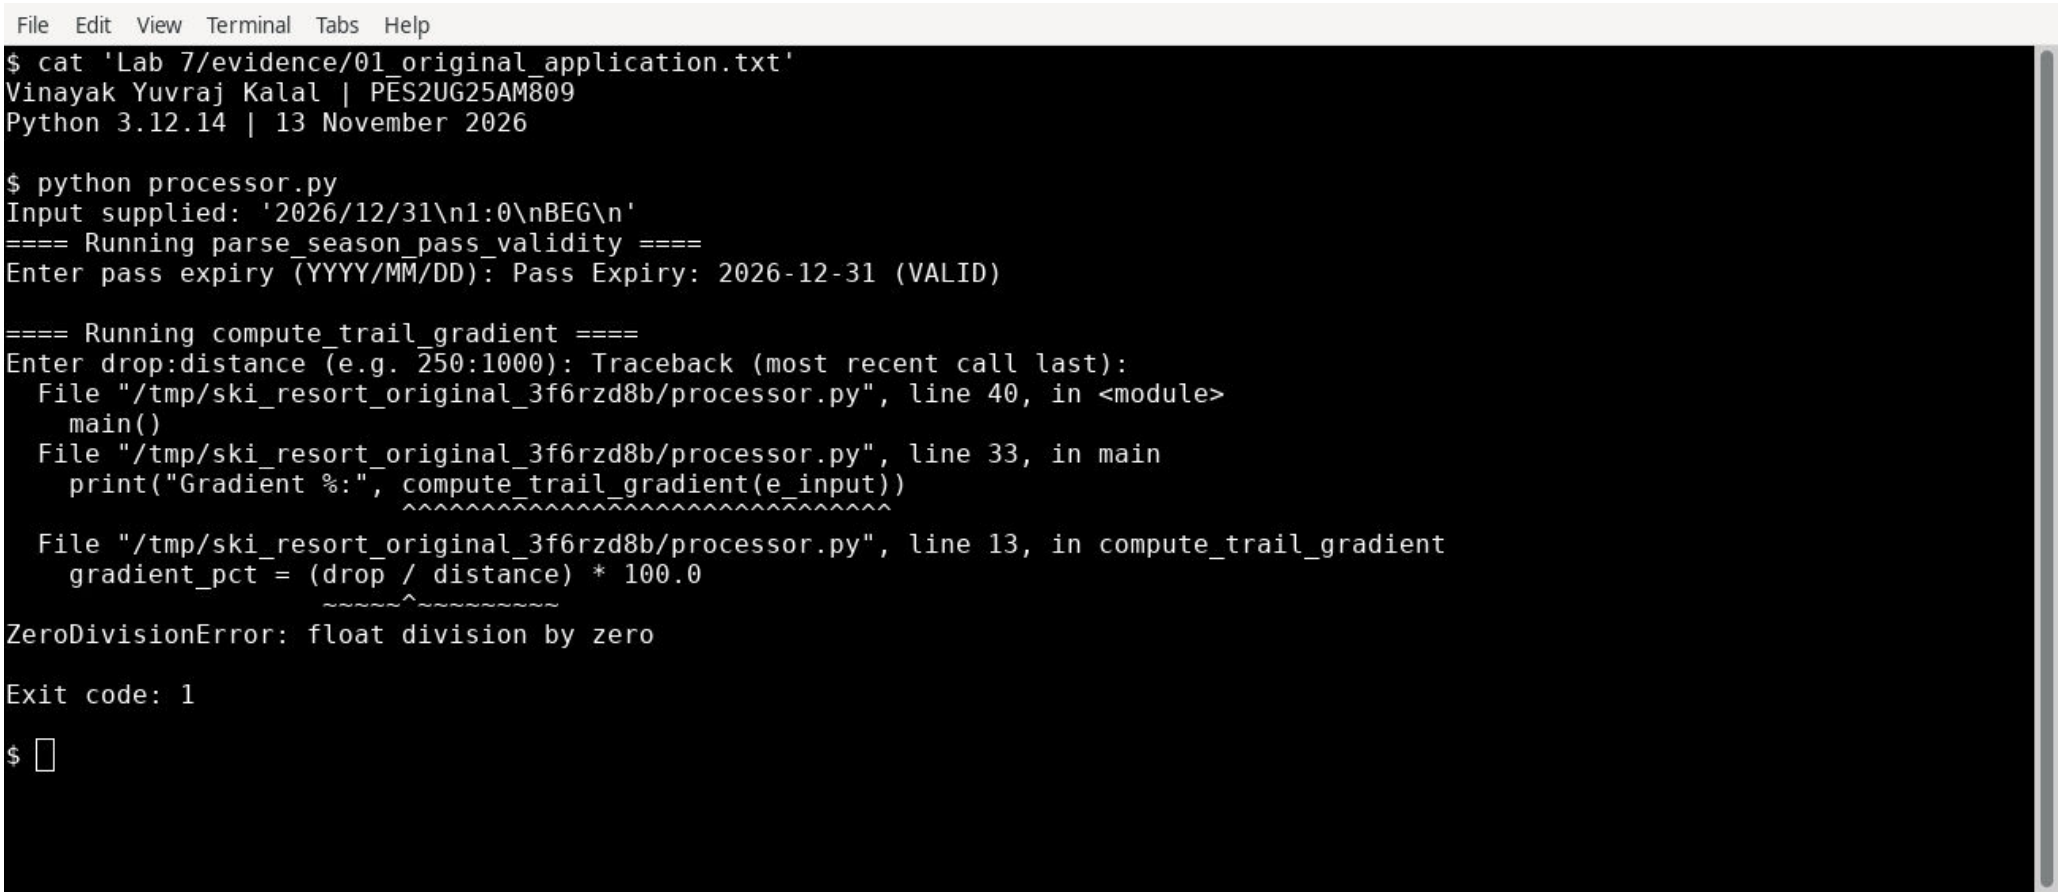

BranchCoverageTest_ski_resort_pass.py

47 tests passed. All 42 branch exits covered: 100% branch coverage.

Lab 7 - Original application

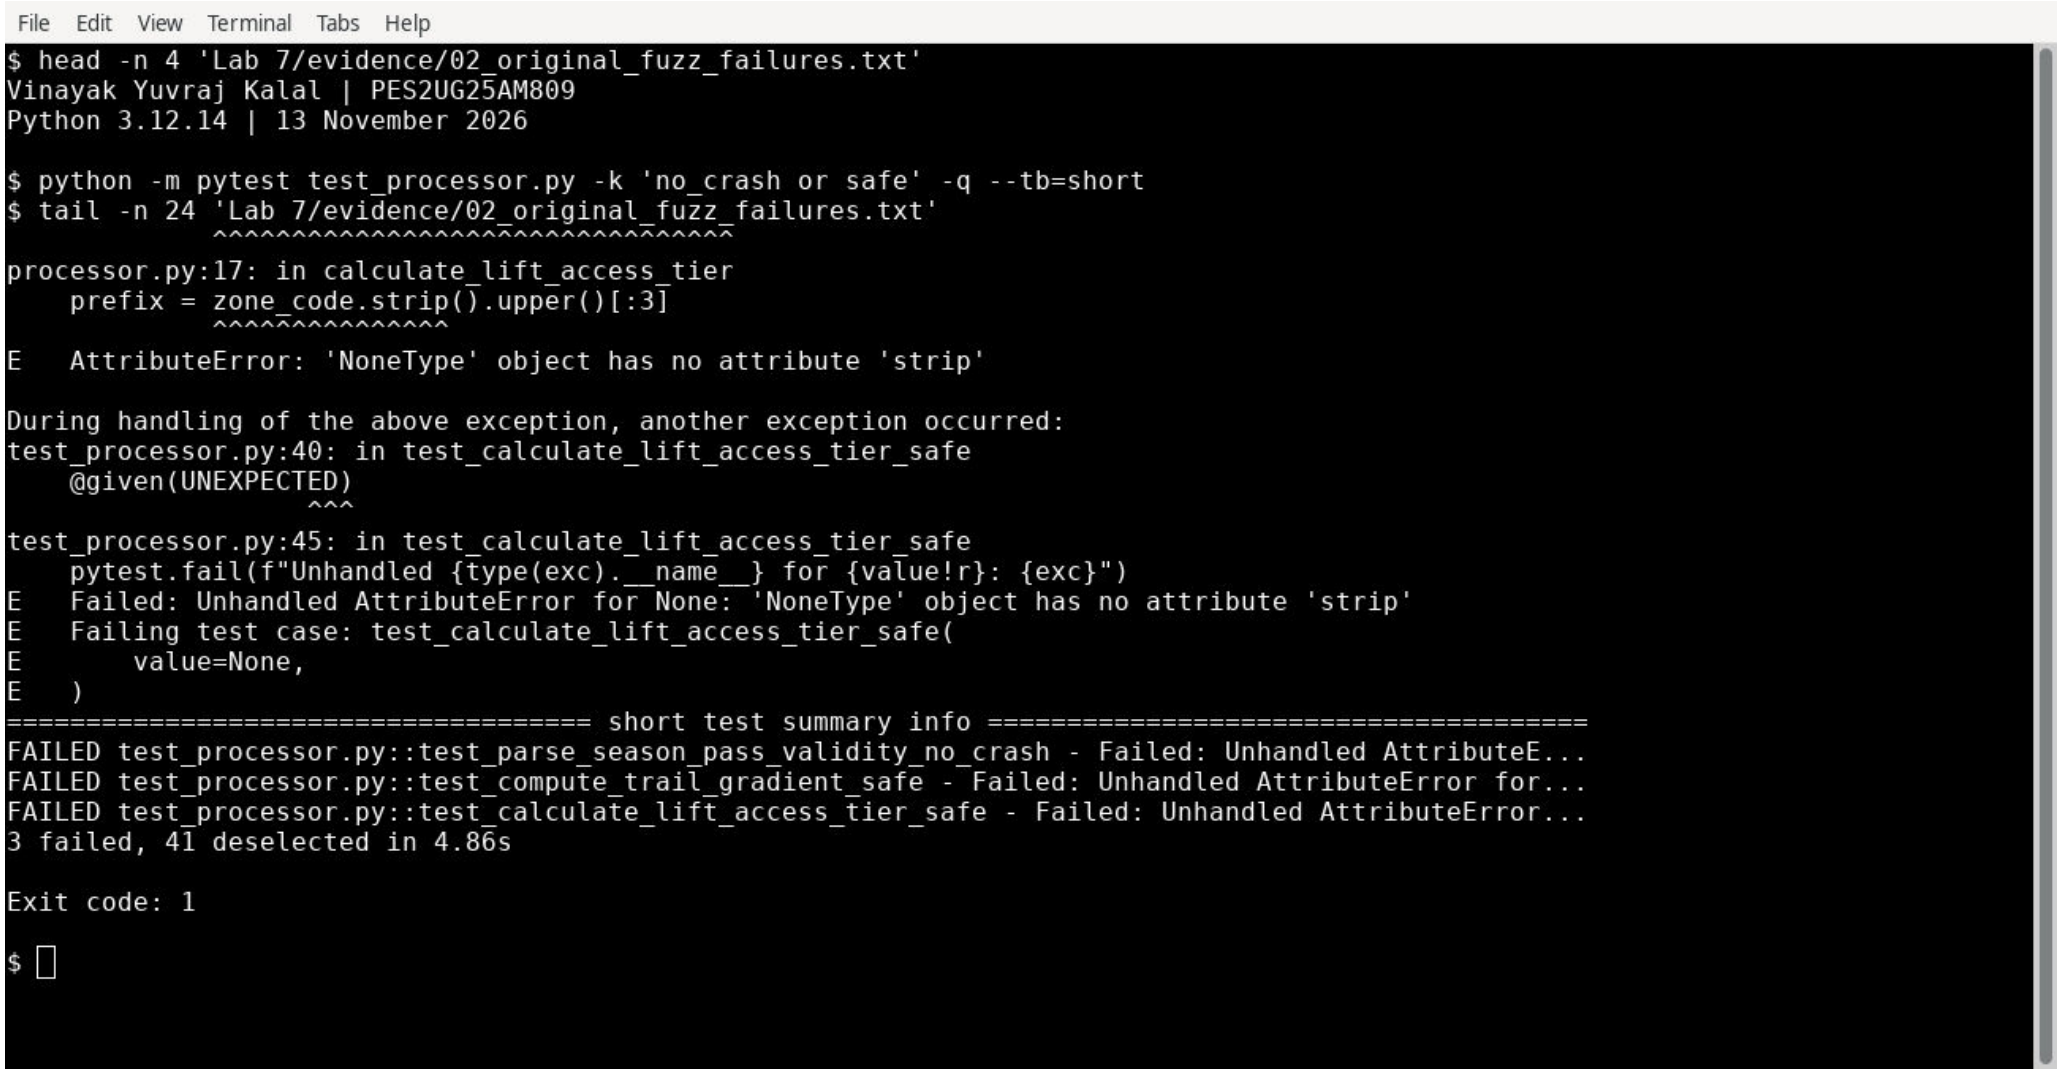

Before fixing processor.py

Input 1:0 causes division by zero. The original application stops with exit code 1.

Lab 7 - Failing fuzz tests

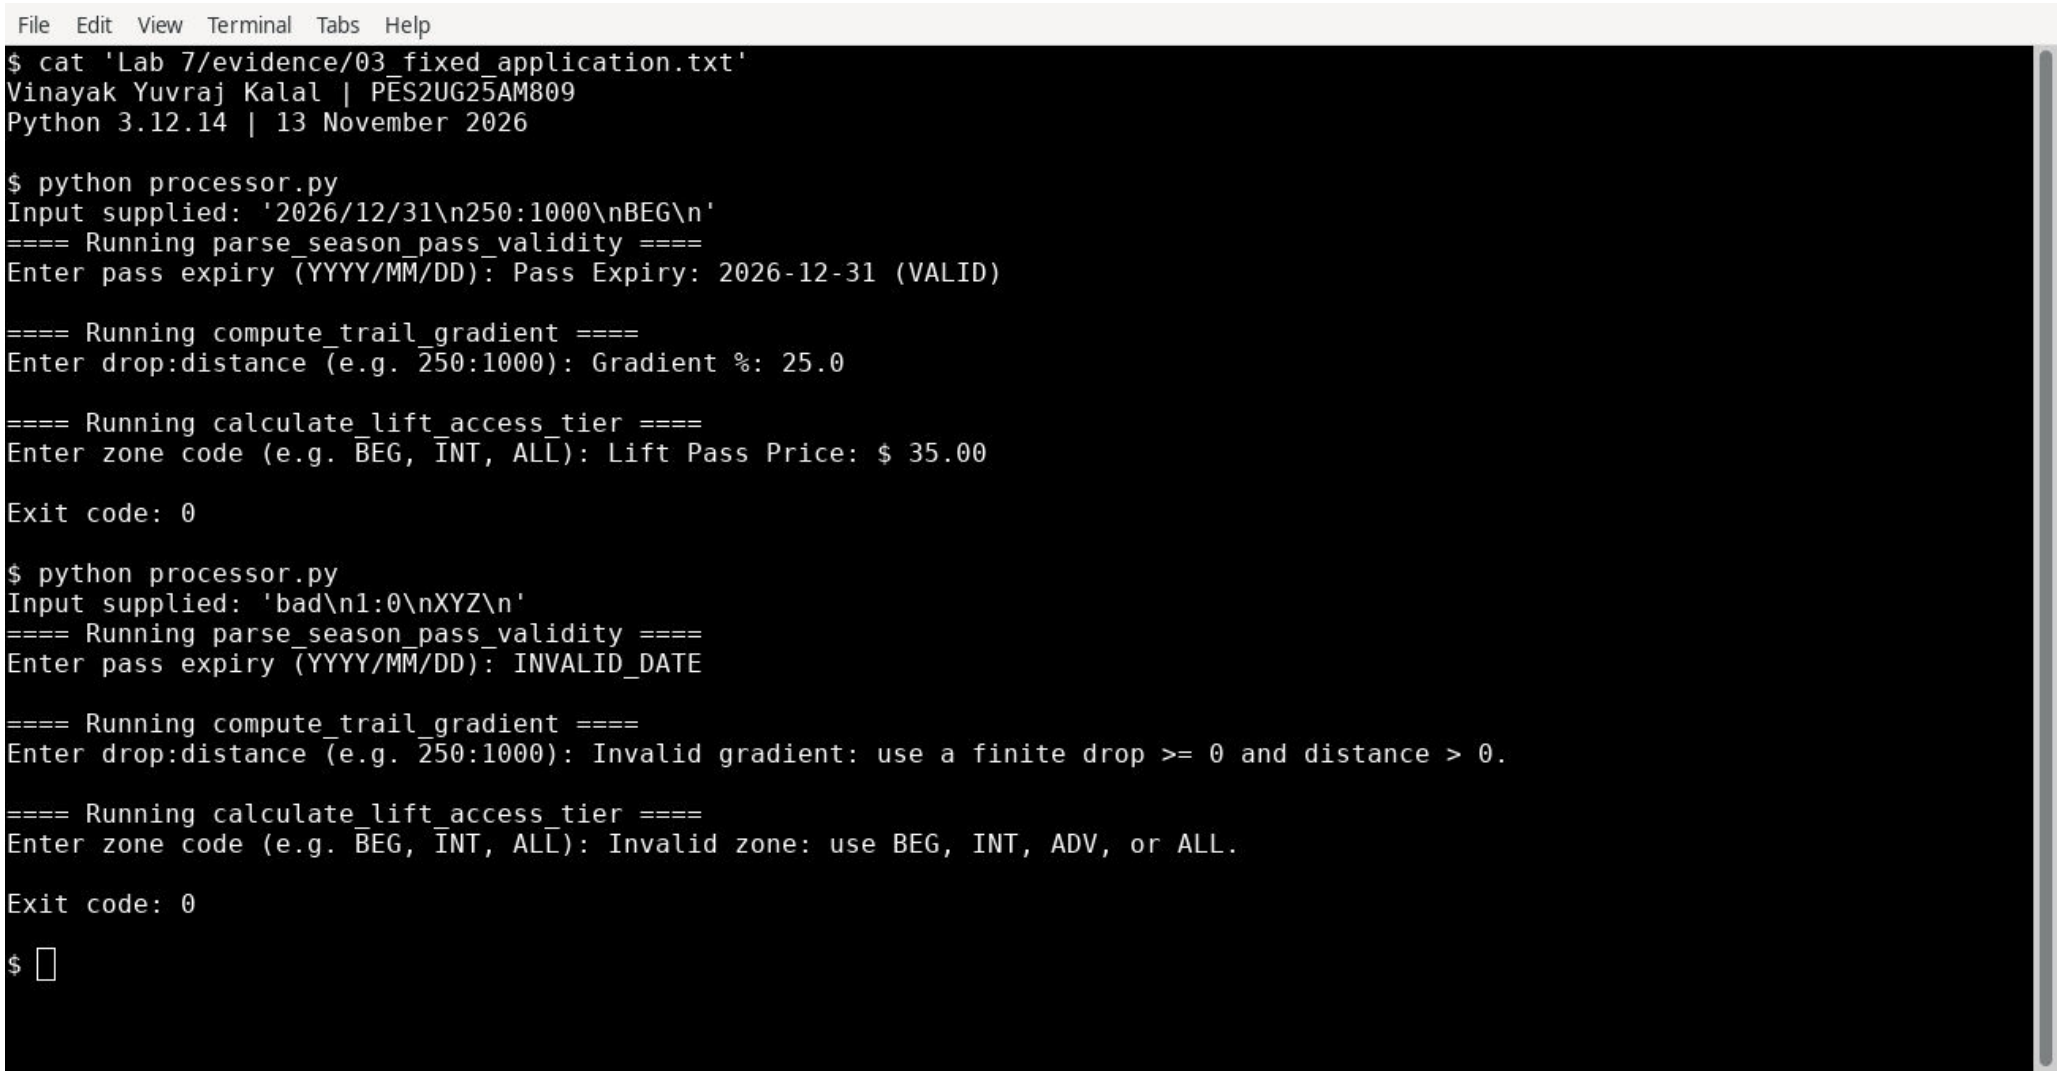

Hypothesis tests against the original processor.py

All three robustness tests fail on None. Screenshot: final 24 lines; complete output is in evidence/02_original_fuzz_failures.txt.

Lab 7 - Fixed application

After fixing processor.py

Valid inputs return the correct results. Invalid inputs are handled safely. Both runs finish with exit code 0.

Lab 7 - Passing fuzz tests

Updated test_processor.py against the fixed processor.py

All 44 tests pass, including generated inputs, calendar dates, numeric boundaries, zone prices, and CLI checks.
